DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a system for calculation of weighting coefficients for a base station comprising a variable beam-pattern array antenna where the calculation is done in a control station, which is connected to the base station via an optical transmission line, classified in class 455, subclass 561, 562.1.
 - II. Claims 15-20, drawn to a system for compensation of transmit signals transmitted from a control station via an optical transmission line to a base station, classified in class 398, subclass 136, 137.
2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are distinct, each from the other because of the following reasons: Invention I has utility such as control of variable beam-pattern array antenna, and Invention II has separate utility such as feedback and compensation for transmitted signals.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
